With the goal of planting a “seed that germinates”, the community organization Casa Pueblo will start a “pilot project” during the school year, aimed at familiarizing high school students with the fundamental concepts of solar energy through practical and theoretic exercises.

The initiative, called “My Solar Seedling”, consists of a small solar power system, accompanied by a storage battery, with which the students will be able to work directly, as well as a module-type notebook that illustrates the basic elements of solar energy production. Later, however, the idea is that schools will be able to receive their own seedlings and generate energy while the students learn, in a practical way, how they work.
