

A 2016 Full of Achievements ^[1]

Submitted by [Giovanna Guerrero-Medina](#) ^[2] on 9 February 2017 - 8:05pm

^[2]

Dear friends,

It is with great pride that we share with you CienciaPR's first [annual report](#) [3], a compendium of the most significant achievements of our organization in 2016.

The report marks the tenth anniversary of our community, which saw the light of day on [January 2006](#) [4]. It has been incredibly inspiring to see how over the last ten years the CienciaPR network has grown, and with it, the number of ideas and projects that place our community of scientists and STEM professionals at the service of the Puerto Rican people.

Without the contributions and commitment of people like you, last year we would not have been able to provide 13 scientific talks to more than 480 members of the general public. We would not have been able to train 34 future scientific leaders through the Yale Ciencia Academy. We would not have been able to celebrate the 162 Seeds of Success that followed their passion for science and shared it with more than 10,500 people.

We thank all of our collaborators and sponsors, many of whom have been walking this path with us for a long time. Your support has given us incredible opportunities to empower the CienciaPR community to increase its reach and impact.

We also thank all of you who with your support, words of encouragement and donations, let us know last year that you are #ConCienciaPR.

And finally, I personally save my most profound thanks to the CienciaPR team of volunteers, who, in a disinterested way, have given all of us their creativity, sweat, time and determination to advance science and Puerto Rico.

Together we have done a lot, but we are not stopping here.

Today, when trends around the world threaten to curtail scientific independence, ignore evidence, or prevent access to scientists, it is more important than ever to remain engaged and involved.

Today, when the fiscal situation in Puerto Rico places our educational institutions and the performance of our students in science and math at risk, it is more important than ever to share our knowledge, examples and advice.

In the next ten years, we hope to better facilitate connections between scientists, students, and our society. Puerto Rico deserves it.

With the help of all of you, in the next ten years, we're going for more!

THANK YOU FOR BEING #CONCIENCIAPR!

*Thanks to our volunteers,
community members, donors and
collaborators for their commitment
and support so that scientific
knowledge can reach to all Puerto
Ricans.*
