RESEARCH PROJECTS AWARDED 2017-2022

	Pablo E. Vivas-Mejia, Ph.D. School of Medicine		Upstream Regulation and Downstream Effectors of c-MYC in Ovarian Cancer		
	Jorge Duconge-Soler, Ph.D. School of Pharmacy		Adapting a Precision Medicine Paradigm in Caribbean Hispanics of Puerto Rico: Measuring the Utility of Genomic Medicine in Thromboembolic Disorders		
	Cristina Palacios, Ph.D. School of Public Health		Maribel Campos, M.D. School of Dental Medicine		Intervention to Promote Physical Activity and Improve Sleep and Feeding Practices in Infants for Preventing Obesity Early in Life (The Baby-Act Trial)

The National Institute on Minority Health and Health Disparities, part of the National Institutes of Health, has awarded \$19 million for the next five years to the University of Puerto Rico Medical Sciences Campus to continue facilitating the development of competitive research being conducted by the Center for Collaborative Research in Minority Health and Health Disparities.

The Center will support translational research projects in basic biomedical, behavioral, and clinical research and will implement innovative approaches to promoting minority health and health disparities research among early career investigators and students. These research projects will enhance participation of Hispanic patients in genomics studies, and provide novel interventions to reduce childhood obesity within and outside Puerto Rico.

Dr. Emma Fernández-Repollet, Professor of Pharmacology and Principal Investigator of the Center stated that “For the next five years we want to contribute to the national infrastructure and the capacity for research in the health sciences by supporting translational studies in health disparities affecting the Puerto Rican population”. Toward this end, the Center will provide services to facilitate the conduct of research studies in cancer, cardiovascular diseases and childhood obesity, all health disparities relevant to the Puerto Rican population, as well as sponsor activities to engage communities in research activities and to promote the professional development of early stage investigators.

Specialized services will be provided in the areas of bioinformatics, proteomics, genomics, tropical and infectious diseases, neurogenetics, and bioimaging. Professional development will be approached through a series of activities including a personalized mentoring program designed to foster successful research careers and technology transfer. This will be complemented by a pilot project program which will provide small grants to junior investigators interested in conducting basic and translational studies in conditions that disproportionately affect the Puerto Rican population. A variety of community-engagement strategies will be designed to increase the number of community-academic collaborations and partnerships, disseminate research findings to a broader audience, enhance the recruitment and retention of study participants, and ultimately reduce health disparities in Puerto Rico.

Sixteen biomedical investigators and twenty-six technical and professional staff will participate in the new award. Over thirty biomedical projects will be impacted during the next five years (2017-2022).
