The College of Human Medicine of Michigan State University (MSU) seeks a bioinformatics scientist for appointment as an Assistant Professor in the Department of Translational Science and Molecular Medicine. This is a three-year, fixed term position. The primary duties of the successful candidate will be to collaborate with biomedical faculty within TSMM in the analysis and interpretation of informatics data sets and provide statistical expertise. The candidate will also have time, if desired, to develop an independent line of research. Candidates should be experts in the domain of bioinformatics and be versed in analysis of next-generation sequencing and epigenetics data, and possess the skills to develop novel approaches and workflows as needed.

Candidates should have a strong record of publications matching their career experience to date. The candidate will be expected to participate in mentoring and instruction of students in MSU

graduate training programs and work with existing faculty to broaden and enhance the vision for research at MSU. MSU offers an extremely competitive salary, benefits and start-up package.
