The lagoon is located in an area that served as a practice firing range when the Marine had possession. (Archive, END)

Puerto Rican scientists and environmentalists are demanding that a channel that linked the Anones lagoon in Vieques to the sea be closed and that the lagoon's grounds be opened to local

researchers to perform environmental toxicity studies. The lagoon, which was part of the U.S. Marine's firing range, has been found to have lead, napalm, merucry, arsenic, and reduced uranium residues, making it one of the most contaminated bodies of water in the world. The new channel that links the lagoon's waters to the open sea, is a health risk for fishermen and consumers.
